

README

File location: `$VCS_HOME/doc/examples/nativetestbench/openvera/rvm/atm/README`

This example is a template for developing RVM-compliant data models and generators. It also contains a simple functional coverage object example.

The data model is a UNI ATM cell.

The classes defined in the "atm.vr" file implement a set of reusable ATM-related verification components. As such, they do not include DUT-specific functionality or information.

The programs defined in the "test_*.vr" files are individual tests to verify the individual ATM verification components. Verifying data models and generators stand-alone is an excellent way to debug an input coverage model and ensure good quality of results from the generators.

To compile:

```
% make
```

To run all tests:

```
% make tests
```
