

README

File location: `$VCS_HOME/doc/examples/nativetestbench/openvera/rvm/coverage/circ_bfr/README`

This example shows how to implement and integrate functional coverage objects.

The class defined in the "coverage.vr" file defines the coverage model for the circular buffer. The file "add_coverage.vr" uses AOP to integrate the coverage model into the verification environment.

To compile:

```
% make
```

To run all tests and collect functional coverage metrics:

```
% make tests
```
