

README

File location: `$VCS_HOME/doc/examples/nativetestbench/openvera/rvm/log/README`

This directory contains examples of various ways the `rvm_log` class can be used to achieve different objectives. Although shown individually, most techniques can be combined to obtain the desired effect.

`rvm_log_fileline.vri` Add source filename and line number to messages.

`xactor_base_log` Separate base class messages from user-defined messages.

To compile:

```
% make
```

To run all examples:

```
% make tests
```
