Check Metal Spacing with Voltage Information

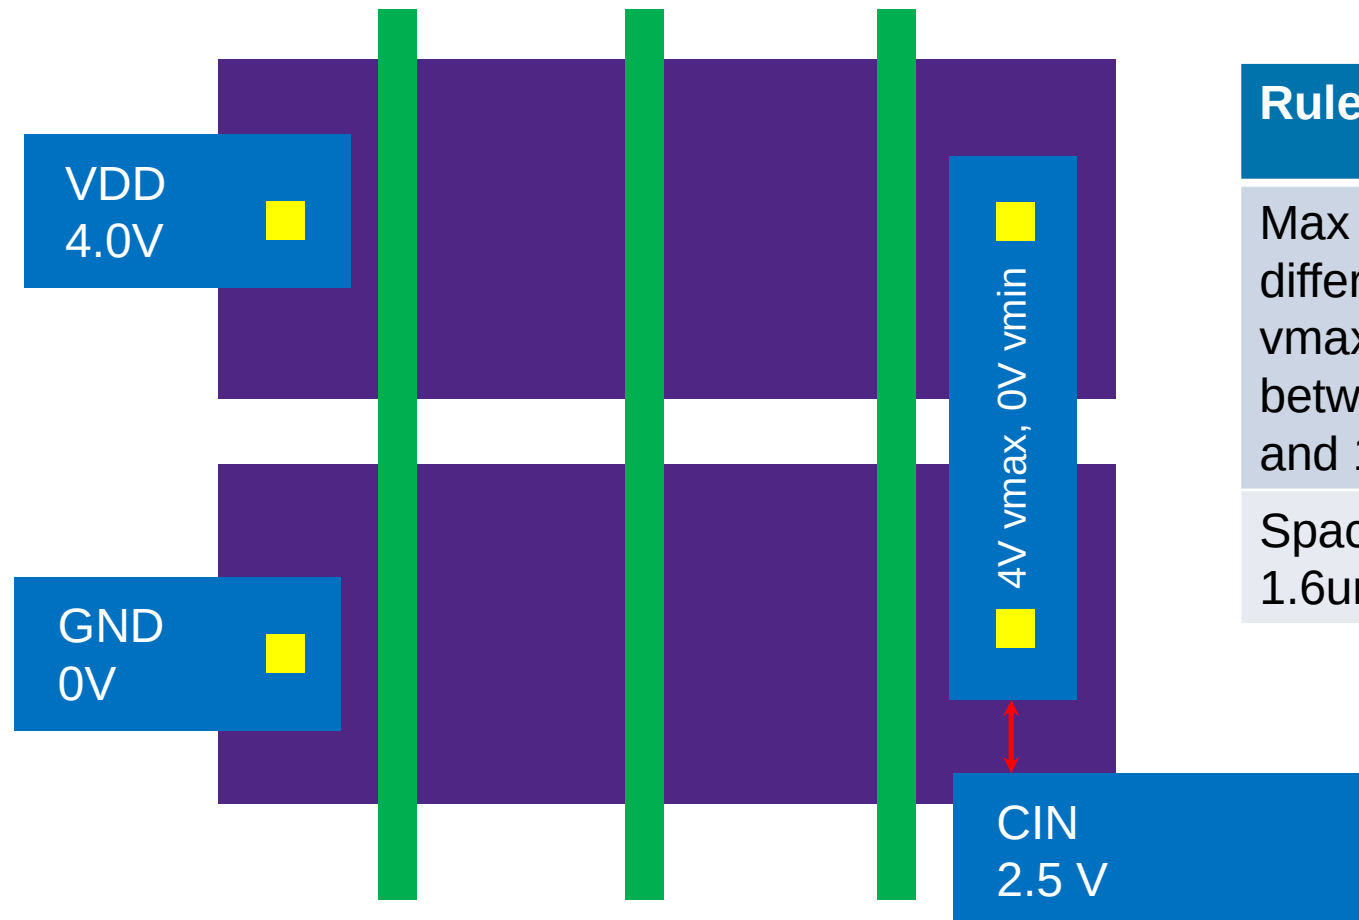

Check Metal Spacing with Voltage Information

- Verify that Metal1 wire spacing is $> 1.6\mu\text{m}$ if the voltage difference between the wires is between 1V and 2.6V

Check Metal Spacing with Voltage Information

- Verify that Metal1 wire spacing is $> 1.6\mu\text{m}$ if the voltage difference between the wires is between 1V and 2.6V
 - Check if spacing rule and voltages on metals are both in violation, if so the rule is flagged

Rule Criterion	Layout Values
Max Voltage difference v _{max} v _{min} between 1V and 1.6um	$\text{abs}(4 - 2.5) = 1.5\text{V}$ $\text{abs}(0 - 2.5) = 2.5\text{V}$ $1\text{V} \leq 1.5\text{V} \parallel 2.5\text{V} \leq 2.6\text{V}$
Spacing $> 1.6\mu\text{m}$	$1.5\mu\text{m}$
